Becoming a Coach Identifying and Solving Common Real Game Situation Problems in the Training Environment This is a different way to look at the game, rather than highlighting what we need to do well, it shows what often goes wrong and how to fix it. These are many situations I have found happen in top level games. How many of these problems do YOU experience with your team? Many of the defensive problems as you will see can EASILY be fixed just with good 1 on 1 or unit pressing. Also defensive tactical positioning is covered; as is improvements in our attacking play. A major improvement is needed though in COMMUNICATION at youth level to help fix all errors in most cases. Contents: 1) Attacking Shape is often WAY TOO narrow 2) We lose the ball with a bad pass where we get countered quickly and caught flat 3) NOT Sliding across and changing who you mark 4) Defensive positioning to fix in defensive team shape 5) Not pressing the opponents striker all the way 6) Not pressing the ball when it is cleared out of the penalty box 7) Poor positioning in and around the 6 yard box from Crosses 8) Positioning at the back when losing the ball 9) Wide players do not recover leaving a 2 v 1 against our fullbacks 10) We defend too deep from free kicks 11) Not closing the wide player down 12) Allowing opponent midfield players to receive and turn 13) Do we drop or press up from the back? 14) Dropping then Pressing 15) They move the ball forward and keep possession; we have to press and also recover at the same time 16) We don't press together as a unit in the Attacking Third 17) Changing shape to counter the opponents who are playing a 4-3-3 18) Not using Spatial Awareness correctly "off the ball" 19) Players need to move BOTH for themselves and for teammates also. 20) How to Regain possession in the attacking third? 21) Condensing and recovery runs by the defending team on losing possession 22) Attacking Play and rotations and movements of players 23) How to create third man runs in the attacking third

A groundbreaking
resource for this burgeoning profession, this text presents several different coaching approaches along with the empirical and theoretical knowledge base supporting each. Recognizing the special character of coaching—that the coaching process is non-medical, collaborative, and highly contextual—the authors lay out an evidence-based coaching model that allows practitioners to integrate their own expertise and the needs of their individual clients with the best current knowledge. This gives coaches the ability to better understand and optimize their own coaching interventions, while not having to conform to a single, rigidly defined practice standard. The Evidence Based Coaching Handbook looks at various approaches and applies each to the same two case studies, demonstrating through this practical comparison the methods, assumptions, and concepts at work in the different approaches. The coverage includes: A contextual model of coaching approaches Systems and complexity theory The behavioral perspective The humanistic perspective Cognitive coaching Adult development theory An integrative, goal-focused approach Psychoanalytically informed coaching Positive psychology An adult learning approach An adventure-based framework Culture and coaching

Power meters have become essential tools for competitive cyclists and triathletes. A power meter displays and records exactly how much energy a cyclist expends, which lends unprecedented insight into that rider’s abilities and fitness. With the proper baseline data, a cyclist can use a power meter to determine race strategy, pacing, and tactics. Training and Racing with a Power Meter makes it possible to exploit the incredible usefulness of the power meter by explaining how to profile strengths and weaknesses, measure fitness and fatigue, optimize workouts, time race readiness, and race using power. This new edition: Enables athletes to predict future performance and time peak form Introduces fatigue profiling, a new testing method to pinpoint weaknesses Includes two training plans to raise functional threshold power and time peaks for race day Offers 75 power-based workouts tuned for specific training goals The updated edition also includes new case studies, a full chapter on triathlon training and racing, and improved 2-color charts and tables throughout.
